

MICROPLUS 501

The Microplus 501 Range

with added refinements to the tested formula of recent years provides the ideal craft for inland or coastal use. Hand made throughout of resin glass with balsa wood reinforcement, these virtually maintenance free craft perform well at speeds from 0-35 mph with maximum comfort, dryness and stability. All boats have twin seats moulded into the rear of the large cockpit, and with 6 ft. double sleeping accommodation, toilet and galley space inside a lockable cabin, the 501 range adds up to a lot of boat in a little space.

The Explorer and Sportsman

models offer contrasting cabin layouts. Though both cruisers have curtain fixings and a large side locker with optional sliding windows and a space saving sliding door, they differ functionally in some aspects, The Explorer has a sink/toilet combination unit added to the large side locker which doubles as a two ring cooker base, thus providing the ideal cabin for family use. In contrast, the Sportsman places more emphasis on general use with increased storage space and includes a versatile hanging compartment.

The Fisherman

has the same general layout as the Sportsman though with simpler mouldings, non-sliding windows and an easily fitted optional hinged door.

The Supreme

model of the Explorer is presented as the ultimate in small boat design. It has been created to provide a more luxurious and comfortable interior than is offered in the standard Microplus 501 range. Structurally and dimensionally there are no changes.
