

the perfect inland cruiser

# Dolphin 21

## Compact Canal & River Cruiser

Designed specifically for inland cruising, this 6'10" beam vessel is equally happy on narrow canals or wide rivers. The hull profile offers easy handling, ensuring mooring and locking are simple operations. A folding screen is fitted as standard to allow your Dolphin 21 to glide easily beneath low bridges and through tunnels.

The four berth layout inside the cabin consists of two single V berths and a double to starboard side which converts to a dining area for four.

The galley is fitted with a sink complete with electrically pumped hot and cold water and there's also a drainer and a full cooker. Ample cupboard space means that long periods afloat are uncluttered.

The toilet compartment offers both a portable toilet and shower, giving you the flexibility to holiday for longer periods.

The full width cockpit has two side seats that double up as lockers. Additionally, these can be

converted into a double sun lounger, ideal for sun bathing. The Dolphin 21 even offers the ability to convert the Sun Lounger into a double berth, offering comfortable accommodation for up to six people.

Seating wise, the cabin provides ample space for four, whilst up to six can be comfortable in the Cockpit. Even in inclement weather, the full cockpit canopy will protect you and your crew.

Whilst the Dolphin 21 is of narrow beam, it is a very stable vessel. Stainless Steel handrails and pulpit rail offer a safe hold whilst on the side deck and a forward hatch provides for even easier access to the forward deck. Cleats and fender eyes complete the stainless steel fittings and full navigation lights are also included as standard.

The Dolphin 21 can be powered by either a petrol outboard or a diesel inboard engine (through a conventional prop-shaft). Engine packages are available.
